

Mountain Camp Method for Emergency Feeding

bag of sugar
newspaper
2-3" deep rim or empty shallow
plant mister filled with warm water

Take the outer and inner covers off and place a rim above the frames.

Place a layer of newspaper, just one or two sheets thick, right on top of the frames. It doesn't need to fit edge-to-edge, in fact a piece that lays in the middle and leaves about an inch around the edges works great. Don't let any of the paper hang outside of the hive.

Pour sugar on it directly from the bag, as much as you can without it spilling down between the frames. Spray water from a mister on top of the sugar so it will form a bit of a crust.
